What is a Beard Transplant ?

A Beard Transplant in Delhi is an advanced hair restoration procedure that transfers healthy hair follicles from the scalp to areas of the beard with thin, patchy, or no hair. The procedure provides permanent, natural-looking facial hair growth.

Who is the Ideal Candidate?

A beard transplant may be suitable for individuals who:

- Have patchy beard growth
- Cannot grow a full beard naturally
- Have facial scars without hair
- Want improved facial aesthetics
- Desire permanent beard enhancement

Benefits of Beard Transplant

1

Permanent facial hair growth

A beard transplant uses your own healthy hair follicles to provide permanent facial hair growth, allowing you to enjoy a fuller beard with long-lasting results.

2

Natural appearance

Each hair follicle is implanted at the correct angle, direction, and density to blend seamlessly with your existing facial hair for a natural-looking beard.

3

Customized beard design

Your beard is carefully designed to complement your facial features, personal preferences.

Beard Transplant Cost in Delhi

The cost depends on several factors:

- Number of grafts required
- Extent of beard coverage
- Surgical complexity
- Individual goals
- Hair characteristics

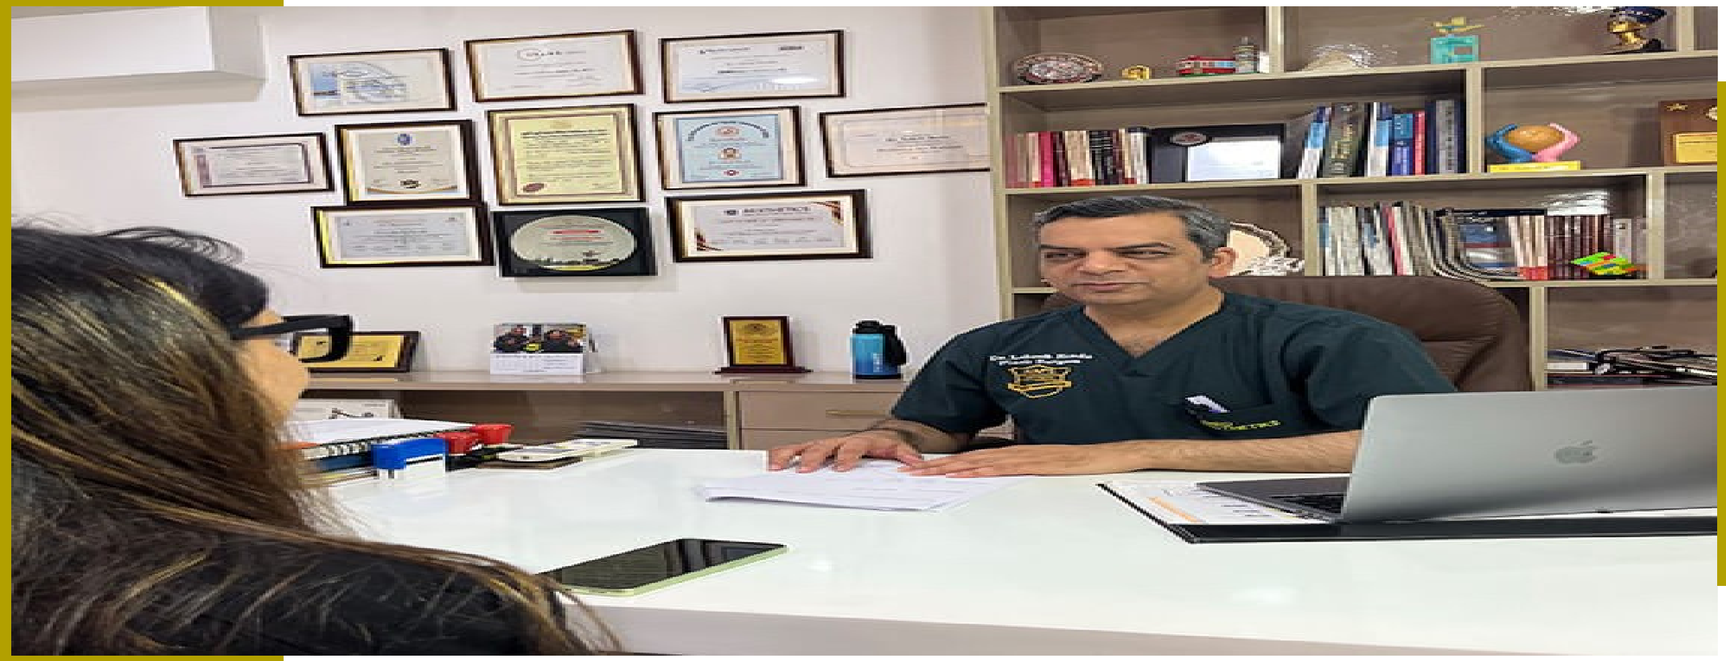
Located near the popular M-Block Market in Greater Kailash Part 1, the clinic is designed to provide safe, modern, and patient-focused aesthetic solutions under one roof.

MED ESTHETIKS



Why Choose Dr. Lokesh Handa?

Dr. Lokesh Handa is an experienced Plastic, Aesthetic & Hair Transplant Surgeon dedicated to delivering natural-looking beard restoration using advanced techniques and individualized treatment planning.

Expected Results & Recovery

Week 1 – Healing Phase

The transplanted area begins to heal, with mild redness, swelling, or tiny scabs gradually resolving. Following your surgeon's aftercare instructions helps ensure a smooth recovery.

2–6 Weeks – Temporary Shedding

Some of the transplanted hairs may shed during this period. This is a normal part of the hair growth cycle, while the hair follicles remain healthy beneath the skin.

9–12 Months – Full, Natural-Looking Results

Most patients achieve their final results within 9 to 12 months, with a fuller, well-defined beard that grows naturally and can be trimmed, shaved, and styled just like existing facial hair.
